

Self-assessment for perfecting story assignment

- **Narrative Structure:** [2] - The narrative progresses logically from an engaging introduction to data exploration, insights, and a call to action. However, I plan to integrate census data directly into the narrative to enrich the story rather than relying on external citations.
- **Data Visualization:** [2] - I've refined the visualizations to be more precise and focused, eliminating complex tables based on peer feedback. I intend to incorporate visual representations of demographic data comparing suburban and urban commuters for future improvements to strengthen the narrative.
- **Interactive Elements:** [3] - For the interactive elements, I already included them in my previous assignment, so I do not have too much problem changing or improving them. I also added a new interactive chart about suburban vs. urban bus performance, which could be interesting for readers to explore.
- **Emotional Connection:** [3] - I effectively used a fictional character to represent the typical demographic challenges suburban commuters face. This narrative technique effectively builds an emotional connection with the audience.
- **Technical Execution:** [2] – I effectively used a fictional character to represent the typical demographic challenges suburban commuters face. This narrative technique effectively builds an emotional connection with the audience.
